

# PROJECT MANAGEMENT

(217/502MAN) Week 1

# PROJECT MANAGER

# Project Managers

- Like other managers, “Project managers” perform activities:
  - plan
  - schedule
  - motivate
  - control
- Unlike other managers, they manage **temporary, non-repetitive** activities, to complete **a fixed life project**.

# Project Manager (PM)

- PM creates a project team and organization where none existed before.
- PM decides what and how things should be done instead of simply managing set processes.
- PM must meet the challenges of each phase of the project life cycle
- And oversee the dissolution of their operation when the project is completed.

# Project Manager's Sphere of Influence

Figure 3-1. Example of Project Manager's Sphere of Influence

# Project Managers

- They are directly linked to the customers and must manage the tension between customer expectations and what is feasible and reasonable.
- Project managers provide direction, coordination, and integration to the project team, which is often made up of part-time participants loyal to their functional departments.
- They often must work with a cadre of outsiders—vendors, suppliers, subcontractors—who do not necessarily share their project allegiance.

# Project Managers

- They must ensure that appropriate trade-offs are made among the **time, cost, and performance** requirements of the project.
- They must orchestrate the completion of the project by inducing the **right people, at the right time**, to address the right issues and make the **right decisions**.

# What Is the Role of Project Manager?

- Implementing the project plan and the completing the project.
- Working with others to formulate a schedule, organize a project team, keep track of progress, and announce what needs to be done next.
- Innovating and adapting to ever-changing circumstances.
- Monitoring results against plans and taking corrective action when necessary.

**Project Management Relates to Other Disciplines!!!**

# Project Management Job Functions

- Define scope of project
- Identify stakeholders, decision-makers, and escalation procedures
- Develop detailed task list (work breakdown structures)
- Estimate time requirements
- Develop initial project management flow chart
- Identify required resources and budget
- Evaluate project requirements
- Identify and evaluate risks
- Prepare work plan
- Identify interdependencies
- Identify and track critical milestones
- Participate in project phase review
- Secure needed resources
- Manage the change control process
- Report project status

**Activity**

**40 Minutes**

### **Activity 3:**

**Activity title:** The Project Manager

**Time:** 40 minutes (150-200 words report)

**Describe the activity:** Read a chapter 3 from *A Guide to the Project Management Body of Knowledge (PMBOK® Guide)*, Project Management Institute, 2017. *ProQuest Ebook Central* ([https://locate.coventry.ac.uk/permalink/f/1keob46/COV\\_ALMA2195480220002011](https://locate.coventry.ac.uk/permalink/f/1keob46/COV_ALMA2195480220002011))

and explain the role of project manager in a project management process.

# To learn more about Project Manager...

- ...read this document

<https://www.pmi.org/-/media/pmi/documents/public/pdf/certifications/project-management-professional-exam-outline.pdf>

# Skills for Project Managers (PM)

PM should be:

- comfortable with change,
- understand the organizations they work in
- be able to lead teams to accomplish project goals

PM need both “hard” and “soft” skills.

- **Hard skills** include product knowledge and knowing how to use various project management tools and techniques
- **Soft skills** include being able to work with various types of people

## Hard skills

Planning

Problem-solving

Budgeting

Scheduling

Risk management

Time management

## Soft skills

Communication

Leadership

Conflict resolution

Negotiation

Empathy

Adaptability

# Competences of Project Manager

## **Innovate and maintain stability:**

- Project managers have to put out fires, restore order, and get the project back on track.
- At the same time they need to be innovative and develop new, better ways of doing things.

## **See the big picture while getting your hands dirty**

- Project managers have to see the big picture and how their project fits within the larger strategy of their firm.
- There are also times when they must get deeply involved in project work and technology.
- If they don't worry about the details, who will?

# Competences of Project Manager

## Encourage individuals but stress the team

- Project managers have to motivate, cajole (persuade), and entice (persuade) individual performers while at the same time maintaining teamwork.
- They must be fair and consistent in their treatment of team members.

## Hands-off/Hands-on

- Project managers have to intervene, resolve stalemates, solve technical problems, and insist on different approaches.
- At the same time they have to recognize when it is appropriate to sit on the side-lines and let other people figure out what to do.

# Competences of Project Manager

## **Flexible but firm.**

- Project managers have to be adaptable and responsive to events and outcomes that occur on the project.
- At the same time they have to hold the line at times and tough it out when everyone else wants to give up.

## **Team versus organizational loyalties.**

- Project managers need to forge a unified project team whose members stimulate one another to extraordinary performance.
- But at the same time they have to counter the excesses of cohesion and the team's resistance to outside ideas.

# Core competences of a successful project manager(ment)

## Systems thinking.

- Project managers must be able to take a holistic rather than a reductionist approach to projects.
- Instead of breaking up a project into individual pieces focuses on trying to understand how relevant project factors collectively interact to produce project outcomes.

## Personal integrity.

- Before you can lead and manage others, you have to be able to lead and manage yourself (Bennis, 1989).
- Begin by establishing a firm sense of who you are, what you stand for, and how you should behave.
- This inner strength provides the buoyancy (quality to float) to endure (face) the ups and downs of the project life cycle and the credibility essential to sustaining the trust of others.

# Core competences of a successful project manager(ment)

## Proactive.

- Good project managers take action before it is needed to prevent small concerns from escalating into major problems.
- They spend the majority of their time working within their sphere of influence to solve problems and not dwelling on things they have little control over.
- Project managers can't be whiners (disappointed).

## High emotional intelligence (EQ).

- Project managers have to have command of their emotions and be able to respond constructively to others when things get a bit out of control.

## General business perspective.

- Because the primary role of a project manager is to integrate the contributions of different business and technical disciplines, it is important that a manager have a general grasp of business fundamentals and how the different functional disciplines interact to contribute to a successful business.

# Core competences of a successful project manager(ment)

## Effective time management.

- Time is a manager's scarcest resource.
- Project managers have to be able to budget their time wisely and quickly adjust their priorities.
- They need to balance their interactions so no one feels ignored.

## Skilful politician.

- Project managers have to be able to deal effectively with a wide range of people and win their support and endorsement of their project.
- They need to be able to sell the virtues of their project without compromising the truth.

## Optimist.

- Project managers have to display a can-do attitude.
- They have to be able to find rays of sunlight in a dismal day and keep people's attention positive.
- A good sense of humour and a playful attitude are often a project manager's greatest strength.

# Most Significant Characteristics of Effective and Ineffective Project Managers

## Effective Project Managers

- Lead by example
- Are visionaries
- Are technically competent
- Are decisive
- Are good communicators
- Are good motivators
- Stand up to upper management when necessary
- Support team members
- Encourage new ideas

## Ineffective Project Managers

- Set bad examples
- Are not self-assured
- Lack technical expertise
- Are poor communicators
- Are poor motivators

**Activity**

**40 Minutes**

## **Activity 4:**

**Activity title:** The Role of Project Manager

**Time:** 40 minutes (150-200 words report)

**Describe the activity:** Watch the video and explain the role of project manager in a project management process.

# STARTING A PROJECT

# PHASES OF PROJECT MANAGEMENT

# Project Charter

[illegible]

# First is WHY!

## The Golden Circle

### WHAT

Every organization on the planet knows WHAT they do. These are products they sell or the services

### HOW

Some organizations know HOW they do it. These are the things that make them special or set them apart from their competition.

### WHY

Very few organizations know WHY they do what they do. WHY is not about making money. That's a result. WHY is a purpose, cause or belief. It's the very reason your organization exists.

# 5 Ws and an H.

## What

What's the decision? What does it mean? What should I know? What's in it for me?

## Why

Why is it the right decision? Why now? Why is it important?

## Where

Where is this decision coming from? Where/what locations will it affect? Where can I get more information?

## When

When is this happening?

## How

How was the decision made? How will it be implemented? How will communications flow internally and externally? How does it impact me?

## Who

Who made the decision? Who's in charge? Who does it impact?

In communicating your message, the order is important. Adult learners want to know the "what" first and then the "why." The rest can follow logically.

***Which W or H do you most often forget to include when you communicate?***

# Setting SMART aims

# 5M's of Management:

- **Men:** For organizational effectiveness and efficiency, the right people are necessary for the right position.
  - Internal Stakeholders (Project Team)
- **Money:** Budget, motivation for employees, investment funding.
  - £116,500 inc. Contingency Funds
- **Minute:** Time management to optimise delivery.
  - 6 months (Feb – August 2020)
- **Machine:** Basic tools to produce goods or generate services. - Computers, Wi-Fi Modems, Internal Harddrives.
- **Materials:** Necessary for Project Team productivity. - Flyers for promotional activity and Launch party décor.

The **Business Model Canvas** is a strategic management template used for developing new business models and documenting existing ones. It offers a visual chart with elements describing a firm's or product's value proposition, infrastructure, customers and finances, assisting businesses to align their activities by illustrating potential trade-offs.

### BMI • Business model canvas

|                                                                                                                                                                                       |                                                                                                                                                                                                   |                                                                                                                                                                                                               |                                                                                                                                                                                                                                            |                                                                                                                                                                                                 |

# The RACI model

The RACI model is a straightforward tool used for identifying roles and responsibilities and avoiding confusion over those roles and responsibilities during a project.

The acronym RACI stands for:

- **Responsible:** The person who does the work to achieve the task. They have responsibility for getting the work done or decision made. As a rule this is one person; examples might be a business analyst, application developer or technical architect.
- **Accountable:** The person who is accountable for the correct and thorough completion of the task. This must be one person and is often the project executive or project sponsor. This is the role that responsible is accountable to and approves their work.
- **Consulted:** The people who provide information for the project and with whom there is two-way communication. This is usually several people, often subject matter experts.
- **Informed:** The people kept informed of progress and with whom there is one-way communication. These are people that are affected by the outcome of the tasks, so need to be kept up-to-date.

# The RACI model – graphic example

| Step | Project Initiation | Project Executive | Project Manager | Business Analyst | Technical Architect | Application Developers |
|------|--------------------|-------------------|-----------------|------------------|---------------------|------------------------|
| 1    | Task 1             | C                 | A/R             | C                | I                   | I                      |
| 2    | Task 2             | A                 | I               | R                | C                   | I                      |
| 3    | Task 3             | A                 | I               | R                | C                   | I                      |
| 4    | Task 4             | C                 | A               | I                | R                   | I                      |

# Creating a RACI Matrix (step-by-step)

1. Identify all the tasks involved in delivering the project and list them on the left-hand side of the chart in completion order.
2. Identify all the project roles and list them along the top of the chart.
3. Complete the cells of the chart identifying who has the responsibility, the accountability and who will be consulted and informed for each task.
4. Ensure every task has a role responsible and a role accountable for it.
5. No tasks should have more than one role accountable. Resolve any conflicts where there is more than one for a particular task.
6. Share, discuss and agree on the RACI Matrix with your stakeholders *before* your project starts.

# RACI Matrix – other versions

A variation of RACI used by the Project Management Institute (PMI) is **RSI**, responsible, sponsor and informed.

Other variations are:

- **RASCI**: with the 'S' standing for 'Support'
- **RACIO**: with the 'O' standing for 'Out of the Loop' or 'Omitted'
- **RACI-VS**: with the 'V' standing for 'Verify' and the 'S' for 'Signatory'

## **Activity 9: Project Scope/Charter**

Plan basic activities and areas of the project by completing project Scope/Charter. Scope templet is published on Aula.
